## AxolotlScout: A Modern Scouting Dashboard for FTC Robotics Teams

Tallahassee, Florida – April 6th, 2026

The Purple Axolots are proud to announce that we will soon release a new project known as AxolotlScout. AxolotlScout is an intuitive, all-in-one dashboard designed for FIRST Tech Challenge teams to streamline their scouting and data analysis. Our team prioritized a design that makes data easily digestible, moving away from traditional spreadsheet formats. By utilizing the FTC-EVENTS API, AxolotlScout automatically aggregates data, allowing users to track progress over time and compare performance with other teams through interactive graphs and charts.

AxolotlScout enables teams to efficiently organize scouting footage and images. Users can internally assign robot photos and match recordings, which are then easily searchable via filters.

The platform also features a streamlined interface for recording information from scouting interviews, ensuring that qualitative data is accessible alongside match footage and team statistics.

- AxolotlScout will be completely free to use.
- All footage and images uploaded will be private.
- AxolotlScout will be made open source.

The Purple Axolots are proud and excited to complete this project over the summer and release more information soon.
